## **Westside W.I.L.Dflower Project**

**Westside Wildflower Project is an outreach service provided by the St. Johns County Health Department and the Good Samaritan Health Clinic focused on providing preconception care for women.**

### **Health Screenings**

Health screenings and testing will be provided to enhance preconception care in our community. Services offered will include urine pregnancy testing, Blood Pressure, Blood Glucose, and BMI screening.

### **Health Education**

Every participant will fill out a screening questionnaire that will allow a nurse to identify their educational needs. Based on responses, each participant will receive individual counseling and be provided with educational information and hand-outs.

### **Linkage to Services**

Participants with health problems and service needs identified through the screenings will be linked by the nurse to the appropriate services in the community creating an easier access to healthcare. In conjunction with our community resources we plan to optimize our client's preconception health to decrease poor birth outcome.

## **Our Goal**

# **Healthy Moms Healthy Babies**

### **FREE PREGNANCY TESTS**
